

Crew Talk - *Day of Mourning*

Date:

Description:

In 2018 the forest industry experienced 3 fatalities directly related to harvesting activities and 1 related to wood products manufacturing. To date there has been 1 harvesting related fatality in 2019.

At today's crew talk we will review some of the fatalities relevant to our line of work and discuss what actions we can take to prevent a similar occurrence.

Think about some of the circumstances that may have brought about the conditions or decisions in these incidents. Do you face them in your day to day work? How can we reduce them happening?

If you have any feedback or concerns about something you've seen on the jobsite please bring them up.

Note to the crew talk leader: You may wish to use the fatality debriefs in the Day of Mourning resource package or the fatality alerts sent out by the Council to discuss the incidents. Ask the crews if they could do one thing differently today based on what they've heard, what would it be? How can the company work to prevent a similar situation on the jobsite today? You can change or add to this crew talk as needed.
