

Faller Trainee Weekly Training and Progress Reports Updates

Tracking and supporting the progress of faller trainees after they have completed their initial 30 days of one-on-one training is an important advocacy role for the BCFSC. One of the key tools used for tracking the progression of training is the Faller Trainee Weekly Training and Progress Report document. After the initial 30 days of training, trainees are required to submit a minimum of 20 approved reports before being signed off to apply to challenge for faller certification. The reports are based on the BC Faller Training Standard and follow a hybrid competency model that is intended to capture the progression of the trainee's competence in knowledge, skills, and attributes as they gain experience over time.

The BCFSC, along with the support of members from the Falling Technical Advisory Committee, has created and piloted an updated version of the Weekly Training and Progress Report document that will soon be implemented into the program and replace the current version being used. The transition into the new document will take place throughout the year. We will continue to accept the old document until December 31, 2024.

The goal of the updated document is to have the trainers capture the evidence that was observed during the week of training, note any deficiencies observed, determine the level of risk posed by any observed deficiencies, and document any extra training or corrective actions that may be required.

The updated document has been posted on the BCFSC website. We encourage you to use this new form moving forward.

If you have any questions, please contact a member of the BCFSC Falling Department. •

FTAC

The March 8th FTAC meeting was focused on Emergency Response Planning (ERP) and how the regulatory changes to Part 3 of the Occupational Health and Safety (OHS) Regulation as well as helicopter support affect the ERP. FTAC invited speakers from WorkSafeBC, Ascent Helicopters and Silva Management Services to speak and present on Emergency Response Planning.

Gordon Craigie, the representative from WorkSafeBC, spoke to the regulatory changes to First Aid. He was able to provide a handout with information on the changes coming into effect November 1, 2024. The changes come as WorkSafeBC looks to align training and equipment requirements across Canada, specifically CSA Z1210-17, first aid training, and CSA Z1220-17, first aid kits. The CSA aligned first aid training will be available starting in June of this year.

Gordon identified four key planning considerations when determining the level of first aid required at the worksite: 1. Number of workers on site 2. Hazard rating assigned to the industry 3. Is the workplace remote and 4. Is the workplace less accessible.

Pierre Gagnon, Trent Lemke, and Sara Andrews presented on behalf of Ascent Helicopters, providing a company overview and a comprehensive review of their fleet of helicopters. The calls have increased significantly in the last 5 years for Ascent as another service on Vancouver Island closed. The group commented that it has been very eye opening to see how much support the sector needed with Emergency Response Planning. Ascent is currently included on 20 ERPs in the sector, seeing the operator's challenges, locations and the need for more fulsome ERPs in those locations as well as the need for more helicopter companies to be included on the ERPs.

Ascent was able to share their "Call Out Request Form" with the group. This form was created so companies would know what information was required by the helicopter company when calling for helicopter support.

Ascent also went on to speak about the requirement for emergency response drills. They highly encourage companies to include helicopter support methods in their ERP drills. This could simply be a call to the office during the drill, ensuring the helicopter company has all the details they require regarding the work location, type of helicopter required and any other pertinent details.

WorkSafeBC representative Gordon Craigie also reminded the group that OHS Regulation requires evacuation drills are performed and documented and that officers will be asking about drills when on site.

Barry Manfield from Silva Management Services Ltd. spoke on ERPs, specifically risk assessments and rescue planning for manual tree falling operations. Risk is the likelihood or probability, and the potential severity that a hazard may lead to injury or disease. A risk assessment must take into consideration the difficulty of rescue and evacuation when developing your ERP. Barry went on to identify numerous items that should be considered when completing an ERP assessment:

Slope/terrain	Working alone situations
Timber type	Severity of the injury
Danger trees	Heli landing sites prepped
Ground cover/debris	Distance to pick up spot
Elevation/aspect	Distance to hospital
Weather	Access & egress paths
Season/time of year	Transportation of injured worker
First Aid attendants' availability	Road conditions
Road conditions	Rescue equipment
Injured person location & how to move them	Hospital accessibility (open?)

WorkSafeBC has developed a resource "Emergency Response Planning: 12 Tips for an Effective Emergency Response Plan". These tips can better prepare you and your crew for an emergency situation.

Validation Session on Faller Practical Field Assessment

Assessors from the three approved administrators, the BC Forest Safety Council (BCFSC), the BC Wildfire Service (BCWS), and the Canadian Association of Geophysical Contractors (CAGC) as well as a representative from WorkSafeBC, attended two validation sessions to review and discuss the new Faller Practical Field Assessment. The Faller Practical Field Assessment is used to assess individuals to the BC Faller Training Standard in a competency-based model, looking at knowledge, skills, and attributes. The document is currently being used by the BCFSC and the BCWS, with the CAGC planning to implement it in the foreseeable future.

The validation sessions were conducted to ensure that each approved administrator and WorkSafeBC had the opportunity to provide feedback, identify potential duplication, suggest changes to streamline the document, seek and provide clarification, and come to a consensus on the content of the document and how it is used. Having the 3 approved administrators along with WorkSafeBC working together will go a long way in improving the alignment of the 3 approved faller training and certification programs.

Feedback was collected and documented during the two sessions and the group plans to meet again to finalize the suggested changes. It is anticipated that additional changes may be required as the document is used throughout the year.

Session at Campbell River Airport

Session in Nelson, BC

New Faller Training

The spring session of BCFSC's New Faller Training (NFT) took place in the Comox Lake area from March 14 – April 15, 2024. A big thank you to lan Emery from Mosaic Forest Products and Aaron Jones of Klaus Posselt Logging Ltd. for supplying the timber and their ongoing support of the program.

Back row, left to right: Trainers Wade Schalm, Jim Lindsay, Zach Burleson, and John Jacobsen.

Front row, left to right: Trainees Beau Smith, Joel Hunt, William McKellar, and Suzanne Villeneuve.
