

In the Bite

Description of the Event:

- A log truck driver was waiting to be loaded and decided to prepare the trailer and raised the stakes. Once the stakes were raised, the driver notice debris caught in the trailer frame.
- The driver used 3-point contact to climb onto the trailer to remove the debris. While doing so the driver placed his right hand at the base of the stake (in the bite) to pull themselves onto the trailer. Due to the movement caused by the driver's weight, the stake extension came down striking the driver's hand.
- This resulted in the driver breaking several bones in his hand.

Contributing Factors:

- Lack of inspections. Faulty stake springs pose a risk to workers.
- Lack of maintenance. Mechanical repairs need to be communicated and prioritized.
- Gloves must offer appropriate protection for the level of risk.

Suggested Actions:

- Safe work procedures must be in place and used when climbing on a trailer.
- Never put yourself or your hand in the bite.
- Regular pre-trip and post-trip inspections of the truck and trailer.
- Regular maintenance of the truck and trailer.
